

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

NOTES FROM A COLUMBUS TAXIDERMIST.—I can report an unusual abundance of Wood Duck this fall. I have mounted eight or ten during the past two weeks, and know of as many more that have been killed. In the years 1900 to 1905 I did not see a Wood Duck and came to regard them as nearly extinct. Indeed many new sportsmen did not know what a Wood Duck is like, and some have come to me with Mergansers saying that they had Wood Ducks. I mention this to show that the bird was almost unknown for a time. In the fall of 1905 these Ducks began to come in for mounting and have been growing more common ever since. Some one with more bird-lore than myself must account for the increase. Certainly every one will be glad of it.

In the spring I had a Black-bellied Plover to mount which I regard as rare. I also knew of two Little Blue Herons being taken at Buckeye Lake. They were preserved by a friend who still has them. I mounted a Double-crested Cormorant for Prof. Mercer of Athens, which was presumably taken at Buckeye Lake.

THOMAS M. EARL.

BEWICK'S WREN (*Thryomanes bewickii*) IN SENECA COUNTY, OHIO.

—On April 3rd, while waiting for a street car in the west end of town I twice heard the song of Bewick's Wren and also saw the bird once. As I have been familiar with the bird for fifteen years in Missouri, Virginia and Southern Ohio, I was greatly surprised to run across this species up in this part of the state, and I regard its occurrence here as purely accidental. This record, together with the Henslow's Sparrow of last fall and the Black-crowned Night Heron of May 14, 1907, brings the number of species for this county up to 208.

W. F. HENNINGER.
